About Monday Morning

Monday morning is a weekly E- CAS (Electronic Current Awareness Service) of RMRC Library, Bhubaneswar which carries one Biomedical & health science news item and some useful current medical research links so that the scientists can access the articles. This E- Bulletin starts its journey from 21st Nov. 2016. In this maiden attempt we cordially invite your inputs and suggestions to improve in future.

Dr. Banamber Sahoo, Lib & Inf. Officer

Americans support genetically engineering animals for people’s health

FISHY WORK In a poll of American’s attitudes toward genetically tweaking animals, three out of four respondents said introducing genes to make aquarium fish like these glow was “taking technology too far.”

1. Ranchi-born American doctor working to find reason behind in Cardiovascular Death

Death due to cardiovascular disease is on the rise in India, causing more than one quarter of all deaths in the country in 2015 and affecting rural populations and young adults the most, according to a study published in The Lancet . For more details click on the below link <https://timesofindia.indiatimes.com/home/education/news/ranchi-born-american-doctor-working-to-find-reason-behind-increase-in-cardiovasuclar-deaths/articleshow/65471415.cms>

2. New kit uses saliva drops to identify HFMD

Scientists from the National University of Singapore (NUS) have found a way to identify children with hand, foot and mouth disease (HFMD) from just a few drops of saliva, even before symptoms show. They hope to eventually make HFMD test kits commonplace in pre-schools and childcare Centre's so cases can be picked up early to prevent the disease from spreading. For more details click on the below link <https://www.straitstimes.com/singapore/health/new-kit-uses-saliva-drops-to-identify-hfmd>

3. Antibiotic side effects in kids lead to nearly 70,000 ER visits in the US each year

Antibiotics are among the most commonly prescribed medications for children, but prior research has suggested that nearly a third, if not more, of outpatient pediatric prescriptions for antibiotics are unnecessary. Efforts to reduce antibiotic overprescribing have largely focused on reducing antibiotic resistance. However, studies have shown that these longer-term societal risks are not always prioritized when clinicians are making decisions about treatment.
