"You can never be overdressed or overeducated.."

- Oscar Wilde

About Monday Morning

Monday morning is a weekly E- CAS (Electronic Current Awareness Service) of RMRC Library, Bhubaneswar which carries one Biomedical & health science news item and some useful current medical research links so that the scientists can access the articles. This E- Bulletin starts its journey from 21st Nov. 2016. In this maiden attempt we cordially invite your inputs and suggestions to improve in future.

Dr. Banamber Sahoo, Lib & Inf. Officer
Sonali Sribastab& Shaktidhar Barik (Lib. Trainee)

Researchers discover the Achilles' heel of an aggressive brain cancer

Figure shows patient-derived glioblastoma in murine brain treated with saline (control, left panel) or clemastine (right panel). Glioblastoma cells (red) are known to invade the brain (BLUE)

1. Sleep Paralysis: Causes, Symptoms & Treatment

People may wake in the middle of the night and find themselves unable to move or utter a sound. They might see a shadowy figure hovering in the corner, feel a pressure on their chest or sense a hand around their throat. Other times, they feel removed from their frozen bodies, as if floating out of their bed sheets. These bizarre experiences are known as sleep paralysis, a diagnosable and fairly common sleeping disorder. For more details, click on the below link

2. Study finds evidence of 'clear relationship' between appendectomy and Parkinson's

An analysis of the health system records of more than 62 million people in the United States has found a link between appendix removal and raised risk of developing Parkinson's disease. For more details, click on the below link

3. WHO is establishing technical advisory group and roster of experts on digital health

WHO's newly-established Digital Health Department will work to harness the power of digital health technologies and steer developments to contribute to the attainment of all people to the highest level of health through the General Programme of Work (GPW13) triple billion goals and Sustainable Development Goal 3. For more details, click on the below link

4. Phage therapy treats patient with drug-resistant bacterial infection

It was the summer of 2017, and her lungs were struggling to reach even a third of their normal function. She had cystic fibrosis, a genetic disease that clogs lungs with mucus and plagues patients with persistent infections. For eight years, she had been taking antibiotics to control two stubborn bacterial strains. For more details, click on the below link

5. Research on repetitive worm behavior may have implications for understanding human disease

Repetition can be useful if you're trying to memorize a poem, master a guitar riff, or just cultivate good habits. When this kind of behavior becomes compulsive, however, it can get in the way of normal life--an impediment sometimes observed in psychiatric illnesses like Tourette's syndrome and autism spectrum disorders.
