About Monday Morning

Monday morning is a weekly E- CAS (Electronic Current Awareness Service) of RMRC Library, Bhubaneswar which carries one Biomedical & health science news item and some useful current medical research links so that the scientists can access the articles. This E- Bulletin starts its journey from 21st Nov. 2016. In this maiden attempt we cordially invite your inputs and suggestions to improve in future.

Dr. Banamber Sahoo, Lib & Inf. Officer
Adyasa Bhoi & Suryajit Samal (Lib. Trainee)

Images of new coronavirus just released

On Thursday (Feb. 13), the Rocky Mountain Laboratories (RML) at the National Institute of Allergy and Infectious Diseases revealed some of the first images of SARS-CoV-2.

1. Skin microbes betray your age

Our bodies are covered with microorganisms such as bacteria, fungi and viruses, a vibrant community collectively known as the human microbiome. And scientists have known for years that the profile of the microbiome changes as we age. For more details, click on the below link.

2. Coronavirus cases soar to 60,000-plus (Here's why): Live updates on COVID-19

Hubei Province, where the outbreak started, has changed how it diagnoses the virus, causing the number of cases to skyrocket in the area. For more details, click on the below link.

3. Tennessee infants exposed to hepatitis C at birth often not tested for virus

Most Tennessee infants exposed to hepatitis C at birth are not later tested to see if they acquired the virus, according to a study by researchers at Monroe Carell Jr. Children's Hospital at Vanderbilt and the Vanderbilt Center for Child Health Policy. For more details, click on the below link.

4. Antibiotics discovered that kill bacteria in a new way

The newly-found corbomycin and the lesser-known complestatin have a never-before-seen way to kill bacteria, which is achieved by blocking the function of the bacterial cell wall. The discovery comes from a family of antibiotics called glycopeptides that are produced by soil bacteria. For more details, click on the below link.

5. Scientists fear coronavirus spread in countries least able to contain it

The possibility of unreported cases is particularly concerning in countries with weaker health-care systems, such as those in southeast Asia and Africa, which could quickly be overwhelmed by a local outbreak, experts say. For more details, click on the below link.
